

Harvest Tec Mixing Chart

Directions:

1. Flush system with Sodium Bicarbonate to remove any acid. Acid will kill the bacteria in Super Sile inoculant.
2. Add some water in the applicator and then add the inoculant. Continue filling with water to aid in mixing.
3. Mix at a rate of 10 grams (about 1 tablespoon) per 10 gallons of water. This will treat 13 tons at medium moisture.
4. Set for the following rates:

Moisture Level	Moisture Content	Application Rate
Low	15-18%	3 pounds per ton
Medium	19-21%	6 pounds per ton
High	22-26%	9 pounds per ton
Very High	27-30%	12 pounds per ton

More Info

Super Sile Dry Hay inoculant is compatible with all applicator systems including mounted, large tank, hand sprayer, stationary, and Harvest Tec.

- Use any leftover mixture within 48 hours after mixing.
- Dry powder may be stored in the fridge and is good for 2 years.
